YERDEN ISITMA STRAFORU

Yerden ısıtma levhaları sağlıklı, konforlu ve ekonomik bir ısınma ortamı sağlamaktadır. Mekandaki ısı kayıplarını, zemin betonu içindekini borularla ısı kaynağından aldığı enerjiyi zemin altına yayarak dağıtan, zemini dolayısıyla ortamı ısıtan bir ısıtma sistemidir. İzolasyon özelliği ile ısı kayıplarını engellerken, ısıtma amaçlı serilen boruların kolay ve homojen bir şekilde yerleştirilmesini sağlar.

- * Isıl iletkenliği düşüktür.
- * Çevre şartlarına dayanıklı ve uzun ömürlüdür.
- * Su emme değeri çok küçüktür.
- * Çok iyi darbe emme özelliği vardır.
- * Bakteri büyümesine karşı dirençlidir.
- * Toplam 45 mm ürün yüksekliği ile modülasyon panel özelliği yanında ısı ve ses yalıtım özelliği olan bir ürün.
- * Çok hassas geçme sistemiyle ısı köprülerine izin vermeyen bir ürün.
- * Genişletilmiş üst yüzey yapısıyla daha mukavim bir ürün.
- * Boru geçme kanallarında koniklik olmaması dolayısıyla boru montaj işçiliğinde büyük zaman tasarrufu sağlayan bir üründür.
